Technical characteristics of the covering Ecoteck Ice Heat and Ice Cover

Set number	Number of pieces per 1m ²	Quantity on a pallet	Weight	Weight on a pallet	Material
AC 191	5,39	38,90	2,416	540	PP
AC 011	10,455	97,56	0,685	698,7	PP

Advantages

- ▶ HEAT ICE/ICE COVER - is a temporary flooring serving for transformation of ice arenas to multifunctional objects. It gives a possibility to transform an ice arena to an exhibition stage, concert venue or a place for other events without ice damage and melting quickly and inexpensively.

- ▶ Mounting of the covering does not require either special tools or specialized personnel. Thus, 6-8 workers can cover medium-sized ice arena within 3-4 hours.

- ▶ The modular construction of the covering makes it easier to clean the floor and increases the effectiveness of cleaning as well as saves your workers' time and simplifies maintenance of the floor.

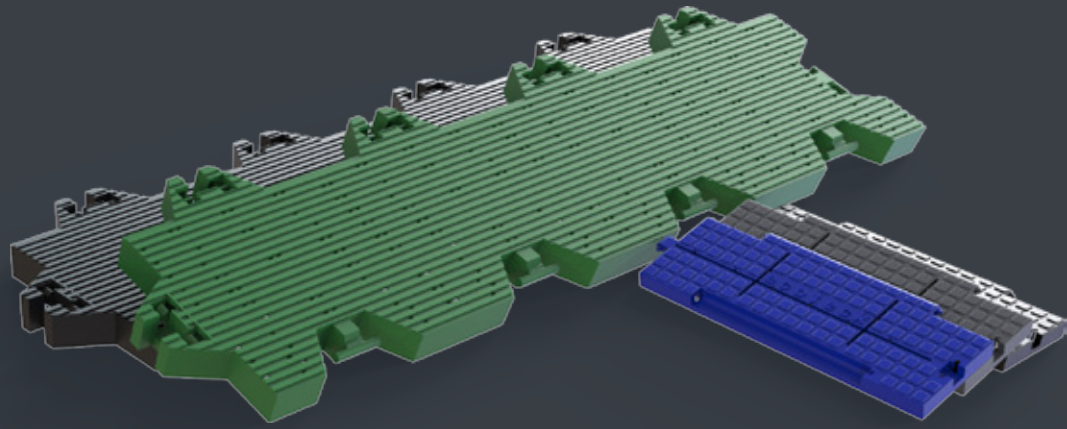

- ▶ The modules are easily joined with each other forming a durable and seamless floor covering for people, transport and equipment.

ECOTECK SNOW MODULES

The absence of snow or high temperatures are not an extreme situation any more. Thanks to Ecoteck Snow you will have a possibility to slide in summer as well as in winter. The slope will always be flawless and ready to any experiments without fear.

SNOW

It is a unique synthetic surface that gives a possibility to do winter sports all year round.

► COLOURS

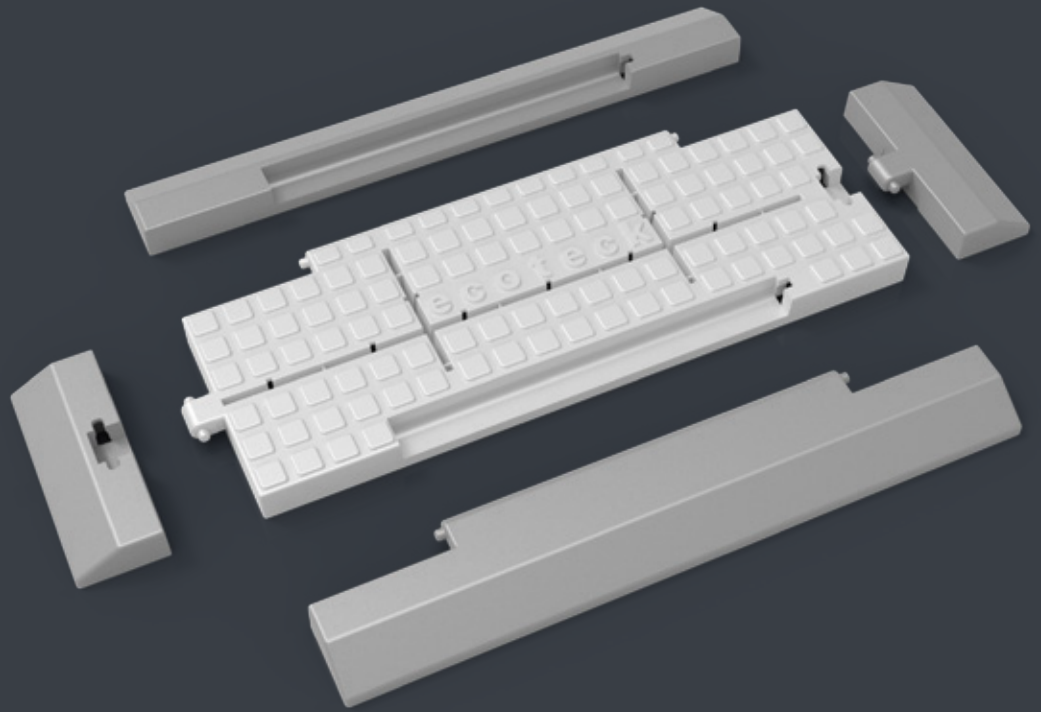

It is developed specifically for the replacement of snow surface in the areas where snow covering is bothly too expensive and labour-intensive process.

Zones of slopes, crossings and linkage roads are among such areas.

The stems were thoroughly developed to reproduce a real snow grip.
